Product Description

1T2R Mode Image Lora Dual Link Uav Communication Wireless Transmission System Ground Station Transmitter

Product Description

Our Product

The ZKManet2401 is a ground terminal specifically designed for long-distance video data communication. It features an integrated GPS tracking module along with a wireless communication module. The airborne GPS module transmits GPS/BD coordinate information to the wireless communication module via a serial port, enabling seamless data transmission. The ground terminal calculates the pointing angle by comparing its own latitude and longitude with those of the airborne module. This ensures that your ground panel antenna remains perfectly aligned with the airborne unit, optimizing wireless reception and significantly extending the operational range. It utilizes a 1T2R dual-antenna configuration, incorporating a high-gain directional antenna for both transmission and reception, as well as an omnidirectional antenna for enhanced signal reception, allowing for more effective signal transmission.

Features

- * 316mw power output for up to 20km range
- * Automatic calibration algorithm at startup
- * With main and sub (LoRa) dual links to ensure timely refreshing of GPS data
- * Using 1T2R dual-antenna for more reliable transmission
- * 360-degree twist-free slip ring
