Product Description

Rugged COFDM UAV Drone HDMI Video Reveiverwith TF Card and Low Power Consumption

Product Description

ZKManet1303R is a wireless image transmission receiver with powerful function and stable performance. With dual antenna reception, TF card and U disk video function, the maximum support 128G storage media, automatic video recording, storage full automatic coverage. High standard HD video output at the same time, HD reception in the case of transmission and reception delay less than 150ms. ZKManet1303R has a small structure and is easy to install, which is widely used in the integration of products with high delay requirements such as drones and unmanned vehicles.

The system utilizes omnidirectional antennas, allowing for the rapid establishment of wireless transmission links. Both the capture and receiving ends can be moved freely without directional restrictions, making the system simple, reliable, and flexible in application. In complex electromagnetic environments, it demonstrates excellent anti-interference capabilities against frequency-selective fading or narrowband interference, as well as superior performance in mitigating interference between signal waveforms. Through joint coding of various subcarriers, it possesses strong resistance to fading.
